# Rachel Burns

**Research Fellow at the UCL Centre of  
Public Health Data Science**

Using public health data science to  
investigate the health of people migrating  
to the UK.

# International migrants have a mortality advantage and this advantage persisted across the majority of ICD-10 disease categories

We examined global patterns of mortality and synthesised data on 14.8 million migrants and 1367 mortality estimates

### Evidence gaps:

- Lack of data on vulnerable subgroups (e.g refugees)
- Changes in health over time since migration

# The highest relative mortality in migrants was from infectious and external causes of death and yet research is lacking in these areas

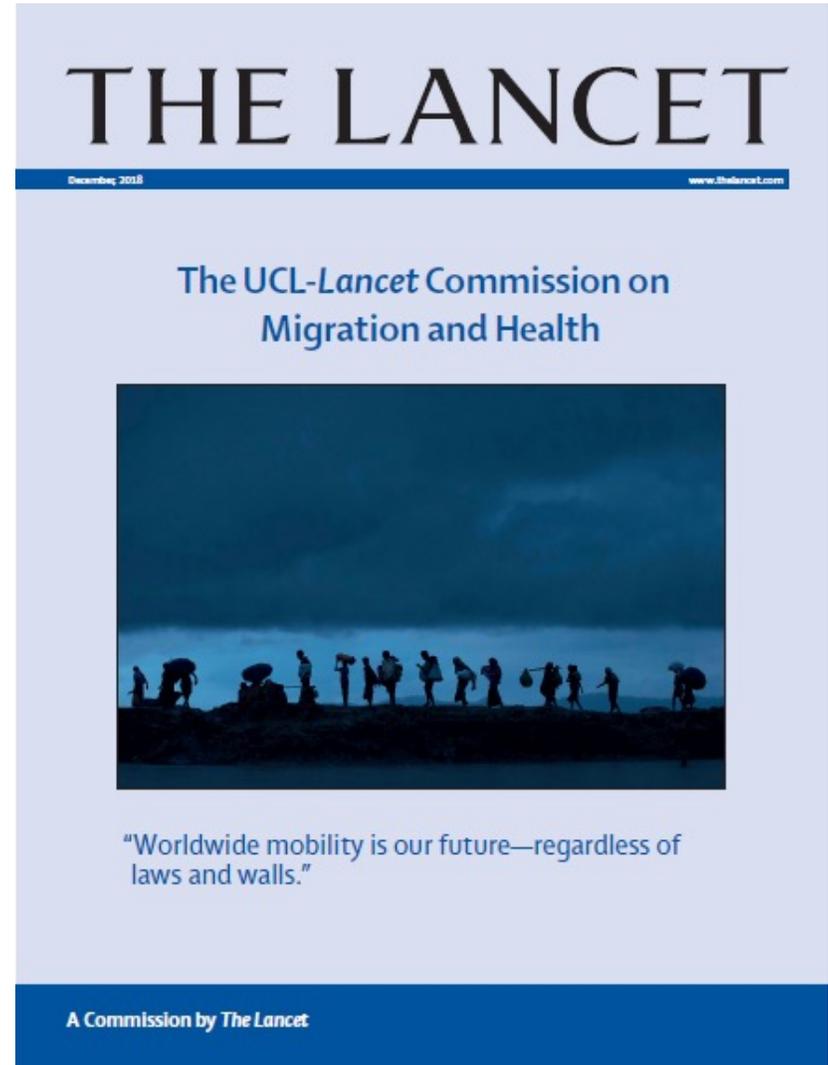

Mortality data points included in systematic review, by ICD-10 group and summary SMR.

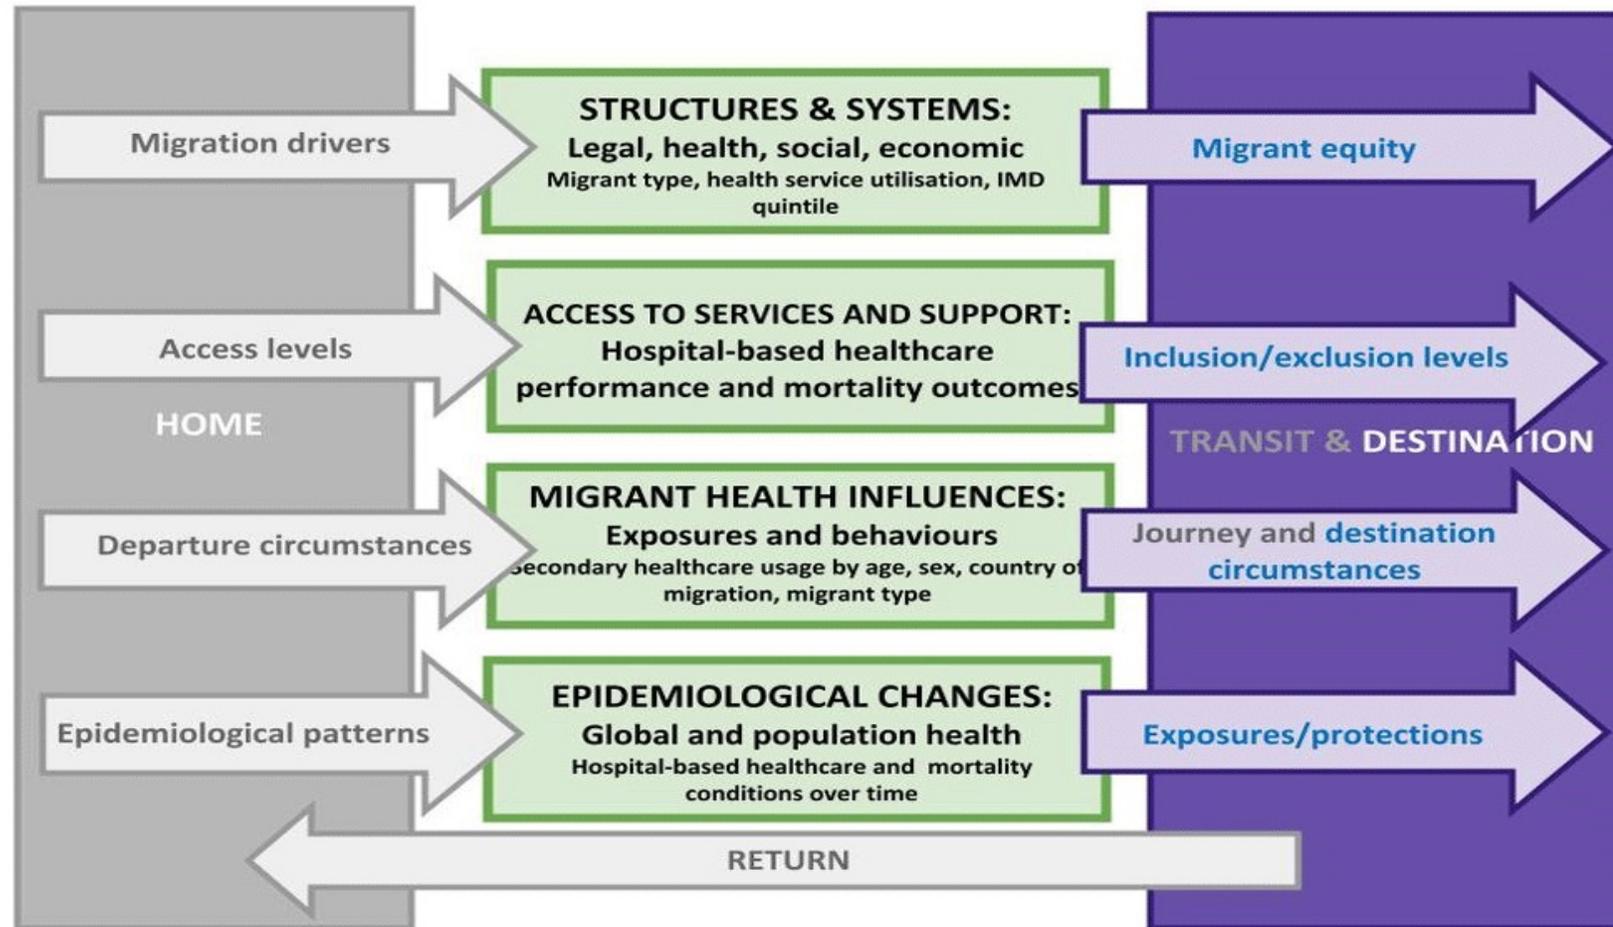

#LancetMigration

@MIGHCommission

info@migrationandhealth.org

# The Commission's conceptual framework examined the wider influences on migration and health

STUDY PROTOCOL

## Million Migrants study of healthcare and mortality outcomes in non-EU migrants and refugees to England: Analysis protocol for a linked population-based cohort study of 1.5 million migrants [version 1; peer review: 2 approved, 2 approved with reservations]

**Abstract**

An estimated 14.2% (9.34 million people) of people living in the UK in 2019 were international migrants. Despite this, there are no large-scale national studies of their healthcare resource utilisation and little is known about how migrants access and use healthcare services. One ongoing study of migration health in the UK, the Million Migrants study, links electronic health records (EHRs) from hospital-based data,

**Abstract**  
 An estimated 14.2% (9.34 million people) of people living in the UK in 2019 were international migrants. Despite this, there are no large-scale national studies of their healthcare resource utilisation and little is known about how migrants access and use healthcare services. One ongoing study of migration health in the UK, the Million Migrants study, links electronic health records (EHRs) from hospital-based data, national death records and Public Health England migrant and refugee data. However, the Million Migrants study cannot provide a complete picture of migration health resource utilisation as it lacks data on migrants from Europe and utilisation of primary care for all international migrants. Our study seeks to address this limitation by using primary care EHR data linked to hospital-based EHRs and

**Abstract**  
**Background:** In 2017, 15.6% of the people living in England were born abroad, yet we have a limited understanding of their use of health services and subsequent health conditions. This linked population-based cohort study aims to describe the hospital-based healthcare and mortality outcomes of 1.5 million non-European Union (EU) migrants and refugees in England.  
**Methods and analysis:** We will link four data sources: first, non-EU migrant tuberculosis pre-entry screening data; second, refugee pre-

## Development, description and validity of a migration code list in CPRD GOLD

Category type	Category name	Definition
<b>Type of clinical term</b>	Visa status indicating migration to the UK	Any code indicating the individual had a visa status for migration to the UK e.g. “asylum seeker”, “student visa”.
	Main/first language not English	Any code indicating English as a second language; this included having a main or first language that was not English, specific terms indicating English as a second language, and terms indicating the need for an interpreter.
	Country of birth outside of the UK	Any code indicating birth outside of the UK e.g. “Born in Morocco”.
	Non-UK origin	Any code indicating an origin from an nation outside of the UK e.g. Middle-eastern origin.
<b>Certainty of migration status</b>	Definite	Patient had a code from any of the following clinical term categories: •Visa status indicating migration to the UK •Country of birth outside of the UK
	Probable	Patient had a code from the following clinical term category: Main/first language not English.
	Possible	Patient had a code from the following clinical term category: Non-UK origin.

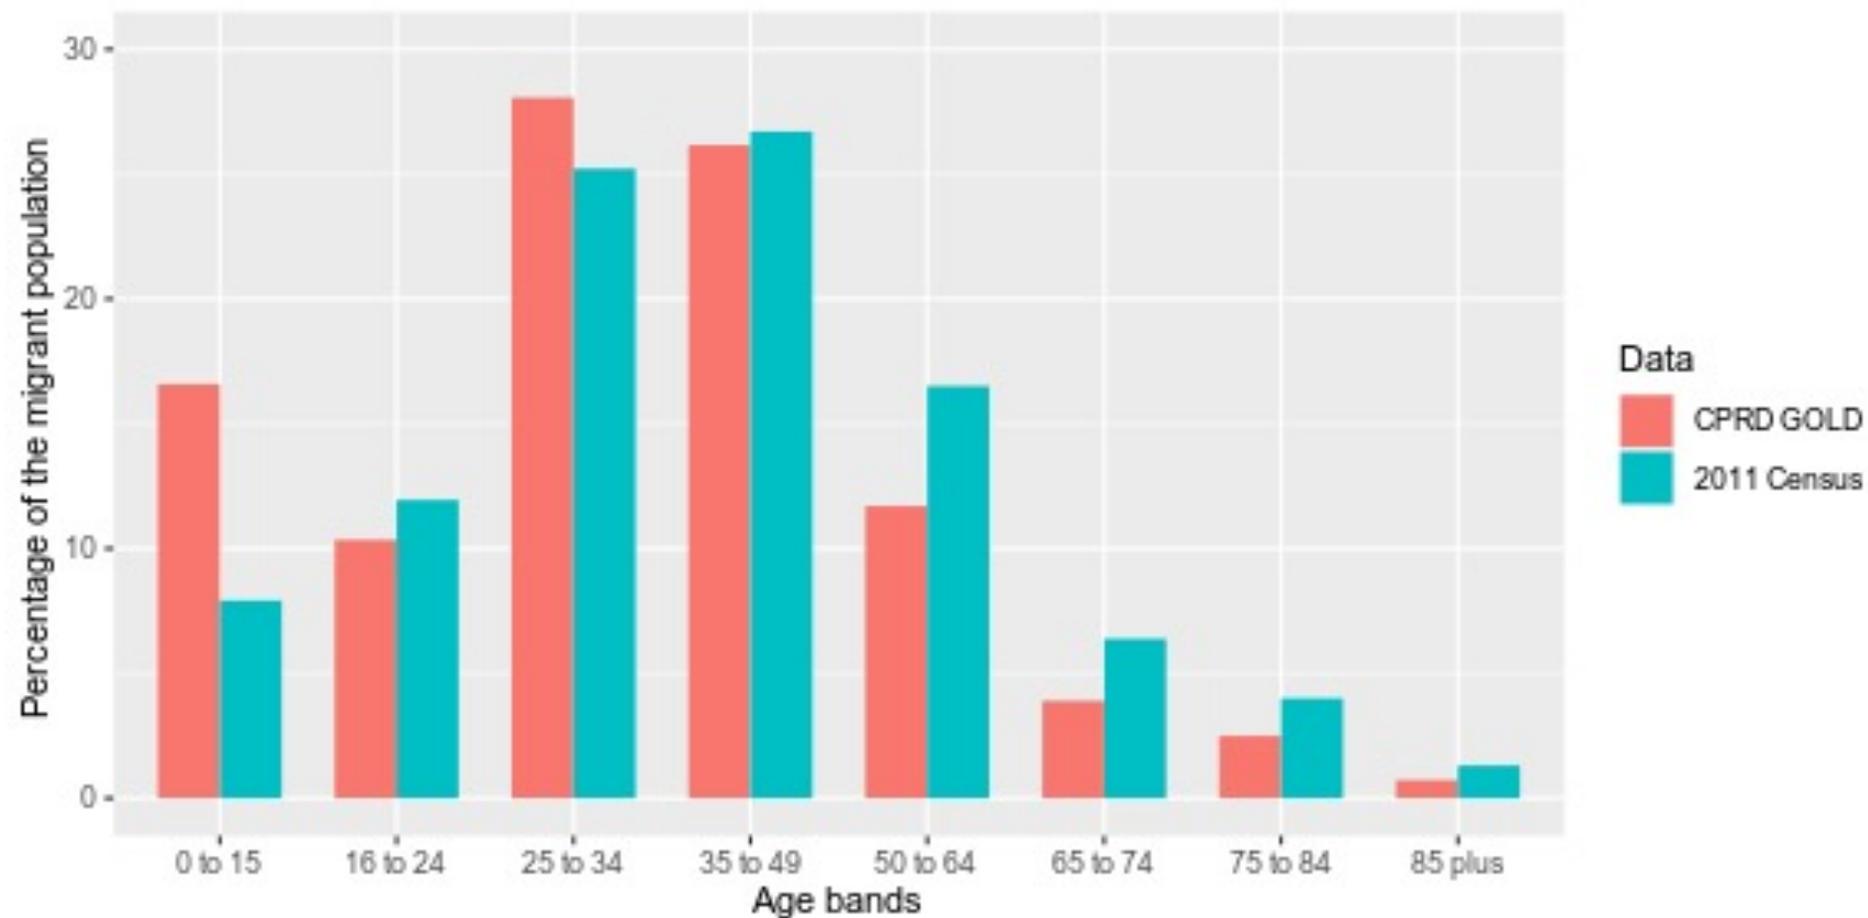

# Categorisation of migrants by certainty of migration status using type of migration code

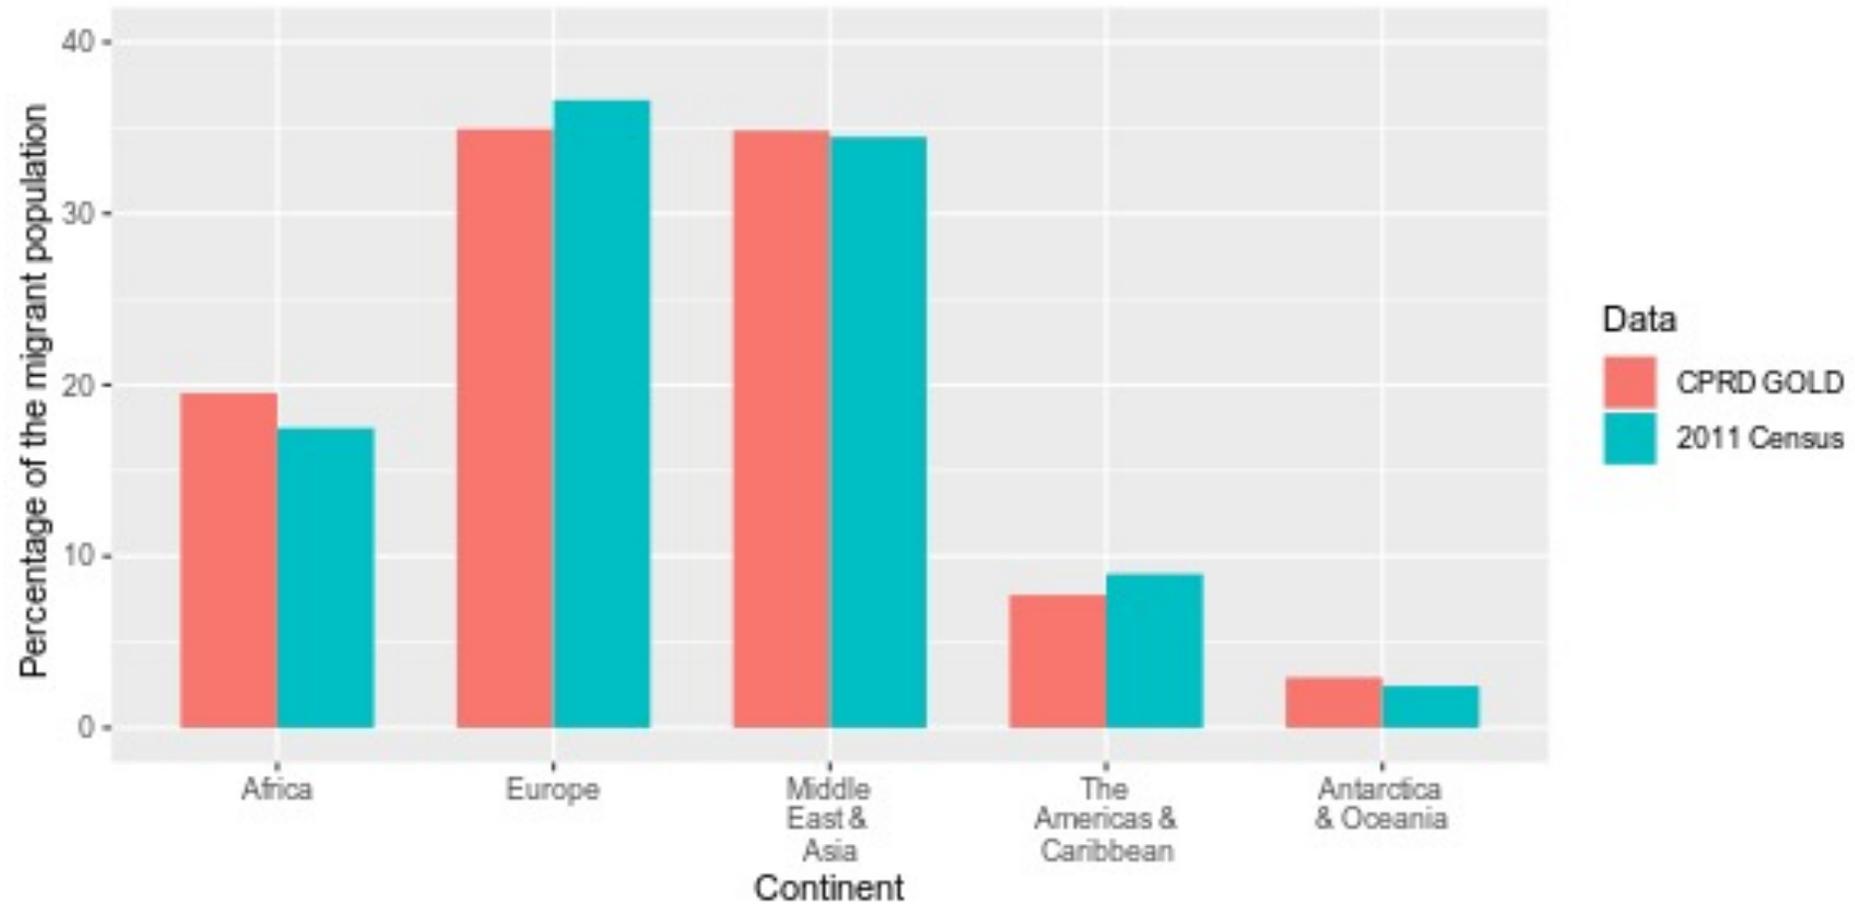

# Percentage of international migrants in CPRD and international migrants in ONS by certainty of migration status (2004-2018).

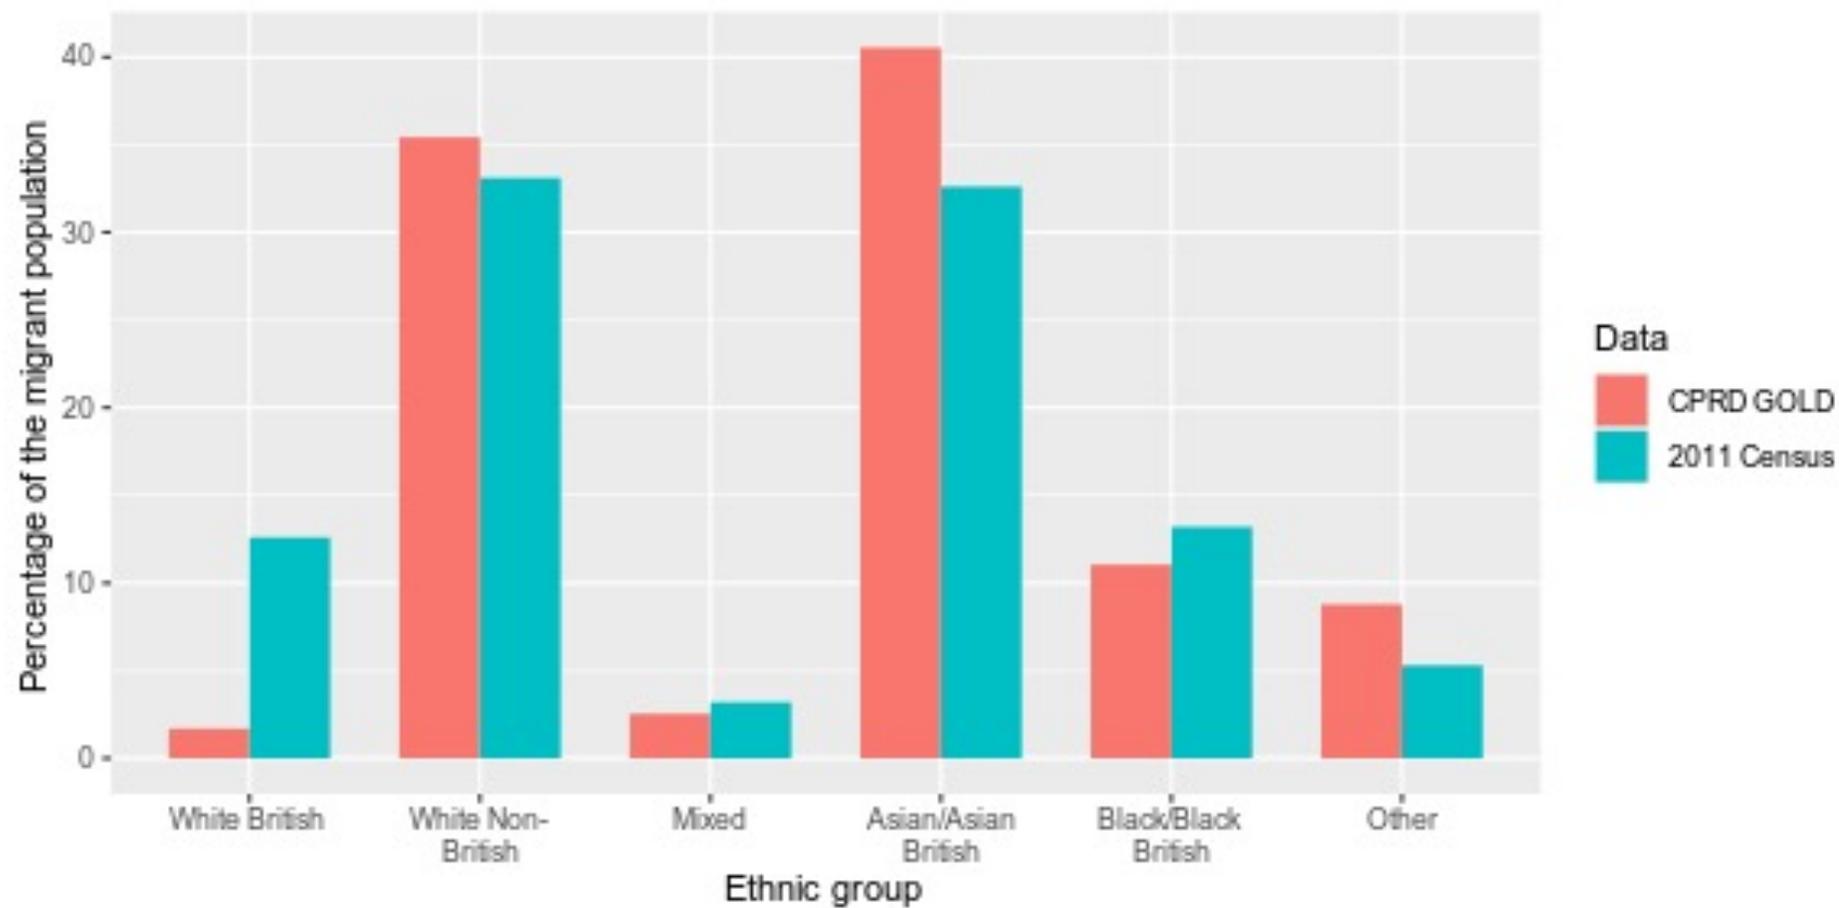

# Percentage age breakdown of CPRD (2011) and ONS migrant population at the time of the 2011 census

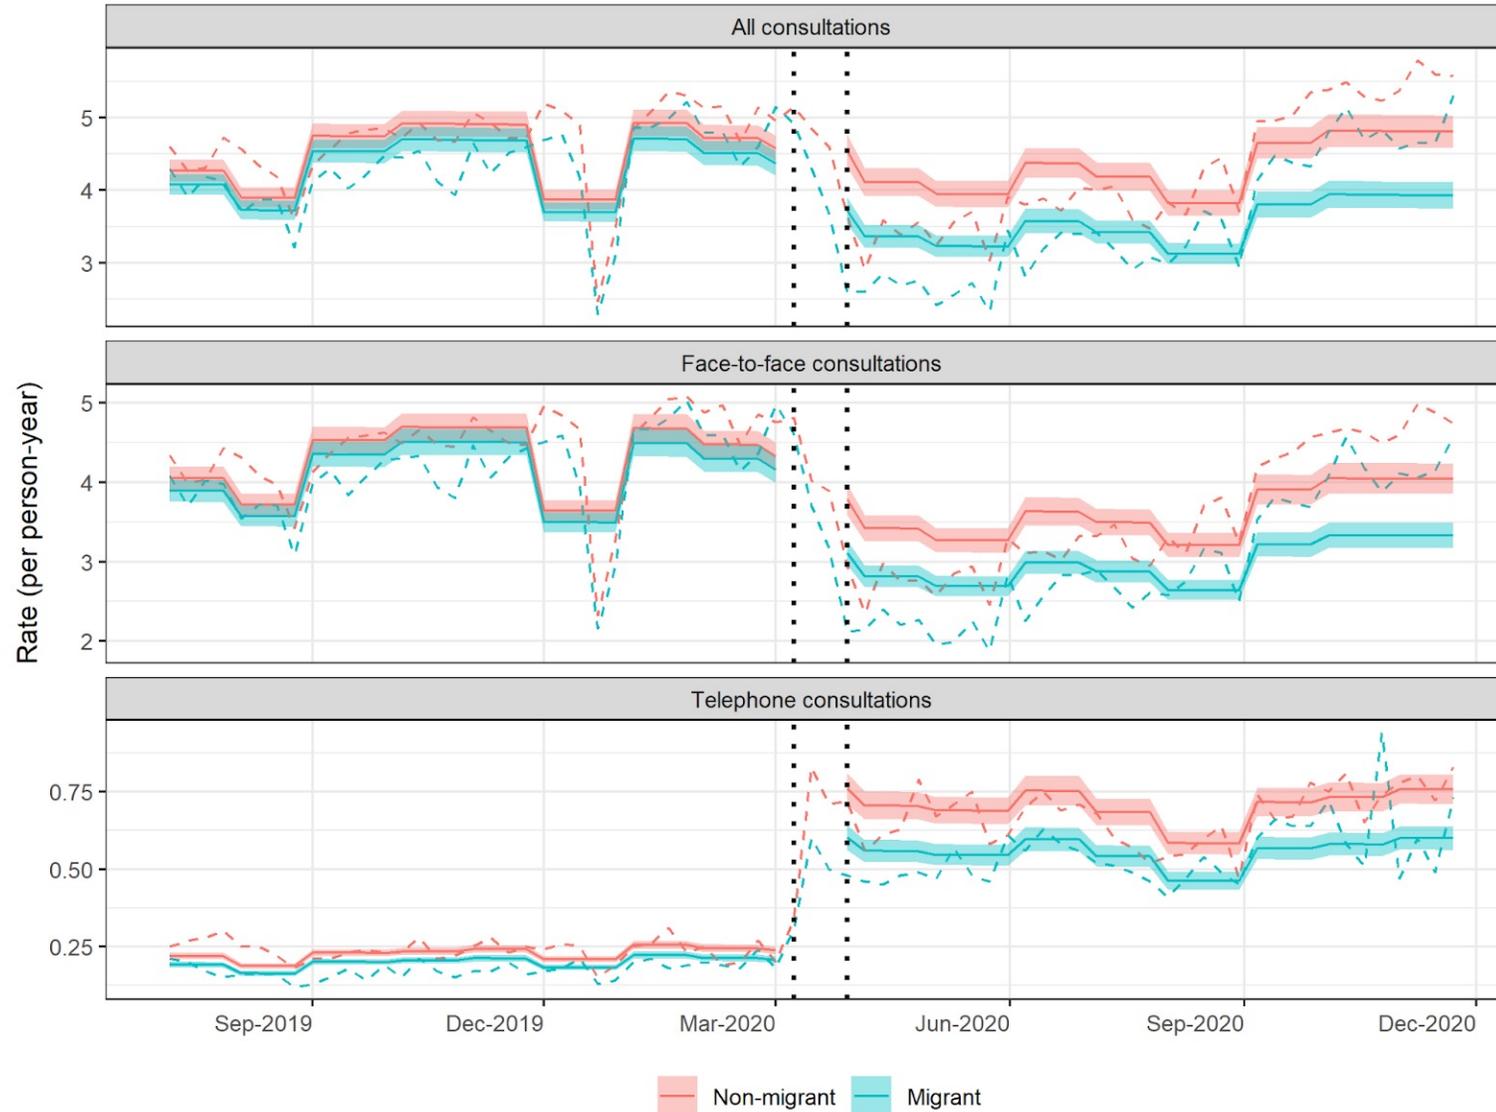

# Percentage of migrants in CPRD (2011) and 2011 census according to continent of birth as defined by ONS

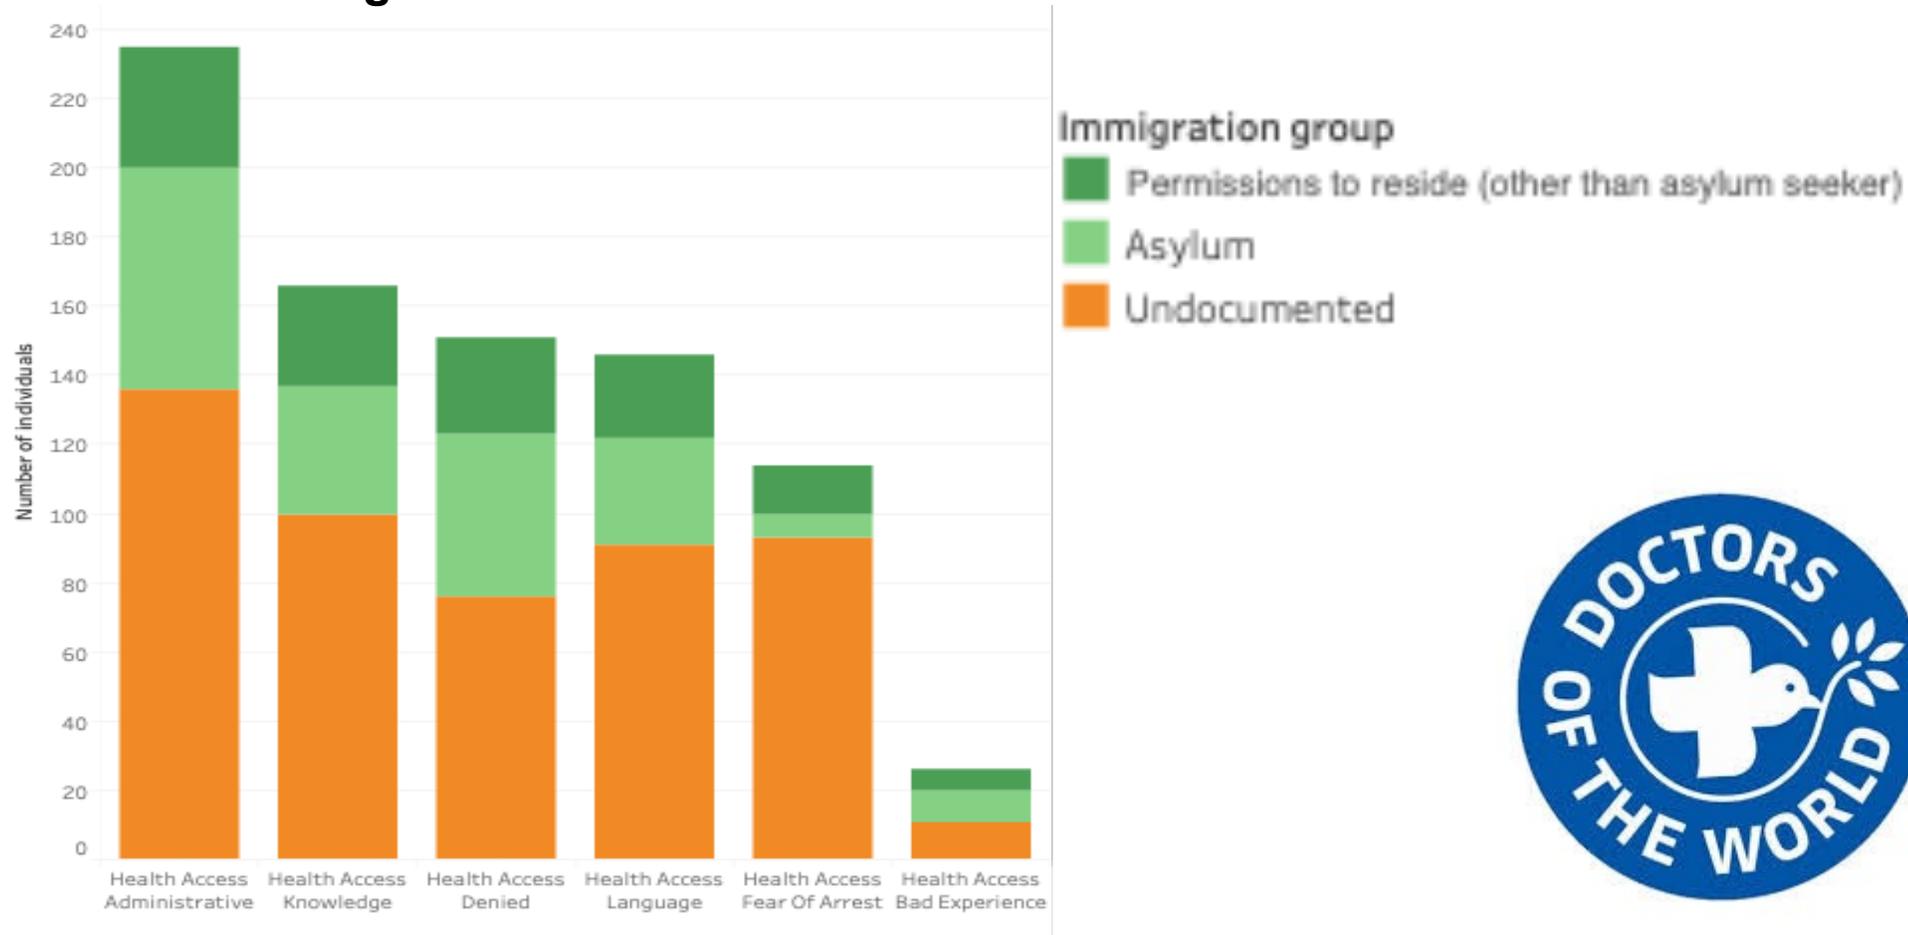

## Percentage of migrants in CPRD (2011) and 2011 census by 6 higher-level ethnic groups

# Weekly consultation rates by migration status in England: predicted rates from interrupted time-series analysis and observed rates, truncated view July 2019 - November 2020

# In the UK, we examined data from a humanitarian healthcare organisation and found barriers to accessing NHS healthcare in migrants

Total number of individuals reporting health access barriers by immigration sub-group

# Right to care: improving access to primary care for inclusion health groups

**University College London Hospitals**

NHS Foundation Trust

# Thank you
